

## 🌴 3-Step Guide to Buy Baby Palm Coin 🌴

Ready to dive into the world of Baby Palm Coin (BPC)? This guide is your ticket to owning this exciting ERC-20 token, whether you're in Australia or beyond! 😊 We've broken it down into three simple steps:

- 1 Signing up for a crypto exchange
- 2 Setting up your MetaMask wallet
- 3 Using Uniswap to grab some Baby Palm Coin

It might sound like a lot, but trust us—it's straightforward, and you'll be a crypto pro in no time. Let's roll! 🚀

---

### Step 1: Sign Up for a Crypto Exchange

To buy Baby Palm Coin, you'll first need Ethereum (ETH). The easiest way to get ETH is through a trusted crypto exchange.

👉 In Australia? Two great choices are:

- CoinSpot ([coinspot.com.au](https://coinspot.com.au)): Huge range of coins, super beginner-friendly.
- Swyftx ([swyftx.com/au](https://swyftx.com/au)): Lower fees (0.6% for instant buys).

How to get started:

- 1 Sign Up → Go to the exchange, click *Sign Up*, and enter your email, name, and a strong password.
  - 2 Verify Your Identity → Upload your ID (driver's license works) + proof of address. Usually approved within minutes.
  - 3 Deposit Funds → Transfer at least \$100 AUD via bank transfer or PayID (PayID is usually instant).
  - 4 Buy ETH → Search *Ethereum (ETH)*, enter the amount, and buy. Done!
- 

### Step 2: Set Up Your MetaMask Wallet

Now that you have ETH, you'll need a safe place to store it. That's where MetaMask comes in—your secure wallet that also connects directly to Uniswap.

Here's how to set it up:

**1** Download MetaMask → Get it from the App Store (iPhone) or Google Play (Android).

**2** Create or Import Wallet →

- *New to MetaMask?* Tap *Create a Wallet*, set a password, and carefully write down your 12-word Secret Recovery Phrase. Store it offline—never share it.
- *Already have one?* Tap *Import Wallet* and enter your 12-word phrase.

**3** Check Ethereum Network → Make sure MetaMask is on Ethereum Mainnet.

**4** Transfer ETH to MetaMask → Copy your wallet address (starts with 0x...) and withdraw ETH from your exchange into MetaMask.

💡 Pro tip: Always keep a little ETH (0.01–0.02) for gas fees (transaction costs).

---

Step 3: Use Uniswap to Buy Baby Palm Coin

Now for the fun part—getting your Baby Palm Coin! 🌴

Here's the step-by-step process inside MetaMask:

🌴 Buying BPC in MetaMask

**1** Prepare Your Wallet

- Ensure MetaMask is installed and set to Ethereum Mainnet.
- Make sure you have ETH loaded (for swaps + gas fees).

**2** Open Uniswap

- Tap the Search icon in MetaMask.
  - On iPhone: it's the circle-with-diamond symbol next to *Settings* (bottom right).
- In the top bar, type: [app.uniswap.org](https://app.uniswap.org)
- You're now in Uniswap.

### 3 Select Token (BPC)

- Tap Select a Token.
- In the search box, type *Baby Palm* or paste the contract address:

0xDABbd22F8A9ac958b654e3E861EfDbA9b6Fd45F9

- Confirm the ticker shows BPC.

### 4 Place a Trade

- Start small: 0.005–0.02 ETH per swap.
- Tap *Swap* → confirm in MetaMask.
- Wait for confirmation on Etherscan (look for “Success”).

### 5 Manage Trade Timing

- Wait 30–60 seconds between swaps.
- This helps the price absorb smoothly.
- If the pool looks stable, you can gradually increase trade size.

### 6 Check Your Balance

- Go to the Assets tab in MetaMask.
  - On iPhone: look for the square-within-a-square icon (bottom left).
- If BPC doesn't appear, tap the + icon → *Import Tokens*.
- Select *Custom Token* and paste the same contract address above:

0xDABbd22F8A9ac958b654e3E861EfDbA9b6Fd45F9

 Congrats—you're now officially a Baby Palm Coin holder! 

Your tokens are safe in MetaMask as long as your Secret Recovery Phrase stays private.

Enjoy the ride. You're now part of the Baby Palms ohana (family).
